Calabar High School

OUR PLANT CONSUME WITH CARE

If I had known I would have ate in smaller portions and throw away the excess
Now darkness creeps over our land turning our leaves yellow I said to myself it's a famine!
People need the food that wasting, I am touched and this is what I am demonstrating.

Deforestation and pollution
Product of wrongful actions
Reforestation and sanitation
Why don't we practice these acts of affection

No worse but better
That all plant played the trendsetter
That mankind and nature
Should always grow together

The air we breathe and the plants we feed
The best we consume
Makes our bodies heal

I looked outside and saw the trees
And watched the plant blowing in the breeze
Things won't be like this in a year or two
If pollution is all we do

The world is getting smaller
Not allowing our plant to grow much taller
Just a little time to grow to their perfection
Leaving its benefits wasted in devastation

If the key to all our health
Is to share in nature's wealth
Then we best invest a plan

To save our wildlife while we can

If a plant is given time to germinate
Then society will greatly appreciate
This reminds me as a child refusing all my greens
Years go by I realized that all these greens have their means
Not many plant base food in our plate
Depriving our bodies with wrongful fate
But if we loved our environment
Then only the best left to demonstrate
